

YOU WOULD LIKE TO BUY OR SELL SOMETHING BUT...

-  ... you might not trust the other party
-  ... you want to avoid a risky cash transfer
-  ... you want to avoid the bad experiences during the deal

GO FOR DIGITRUST, OUR TRUSTED PAYMENT SOLUTION !

Digitrust makes it possible to establish a relationship of trust between two parties who wish to carry out a financial transaction within the framework of a common project (simple purchase-sale, real estate operation, etc.).

The National Bank of Belgium imposes on Digitreal very high standards in financial, legal and security terms: it is your best guarantee.

CERTIFIED IDENTITY

Both parties must be officially registered on www.digitreal.eu. Their Identity is verified by our compliance department.

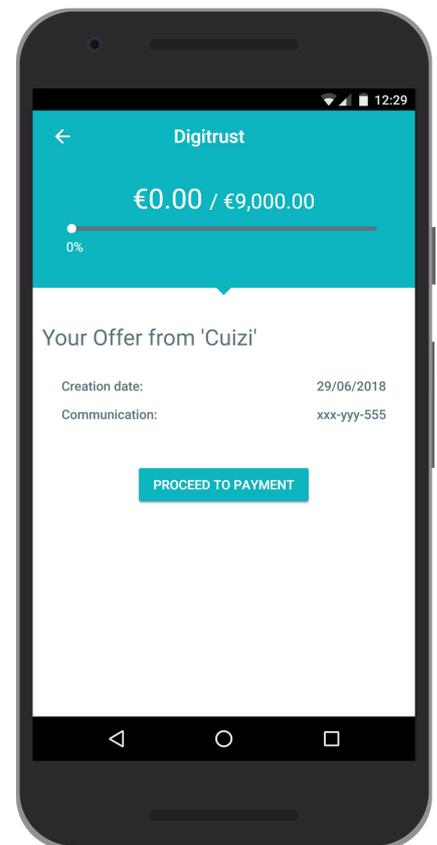

ELECTRONIC SAFE

Your money is safe in a secure electronic safe (segregated account). No cash in the transaction means no bad surprises.

DOUBLE CONFIRMATION

Your money is transferred only after confirmation. Both buyer and seller confirm the success of the operation to release the money.

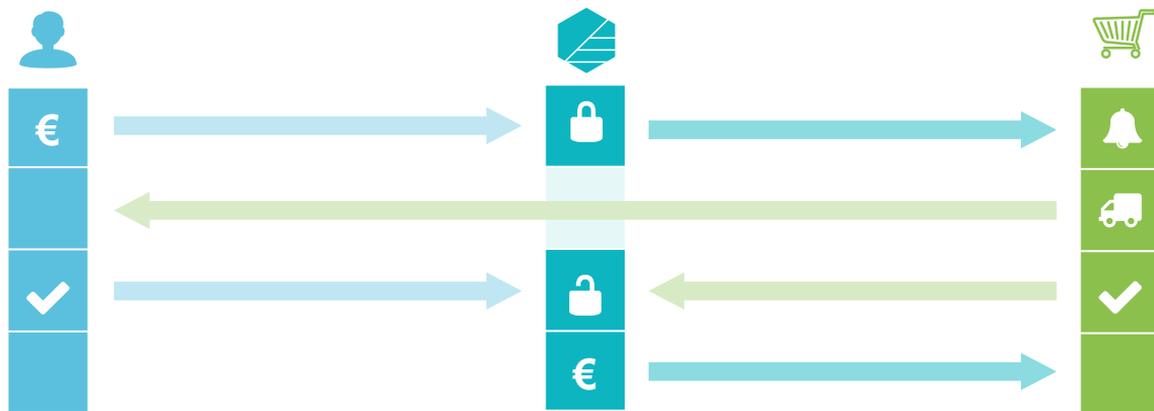

HOW DOES IT WORK ?

Julie buys a € 9,000 kitchen from **Cuizi**. She does not want to pay a deposit without being sure that Cuizi will come and install the kitchen. As for the company, it does not want to order customized equipment without confirmation that Julie will be able to pay the entire order.

HOW TO START?

Julie and Cuizi create their respective accounts on www.digiteal.eu. Via the Digiteal application, Cuizi sends Julie a request to transfer the € 9,000 to Digiteal's bank account.

Cuizi is automatically notified as soon as Julie's money has arrived on Digiteal's segregated account.

The day of delivery, Cuizi asks Julie to confirm delivery through the application. Once validated, the € 9,000 are released and transferred to the bank account of Cuizi.

Who pays what?

The **Digitrust** service will be billed to Cuizi (fixed fee depending on the amount of the transaction, € 29 in this case). Generally Cuizi makes a commercial gesture towards Julie to go through **Digitrust**, although it is in the interest of both parties.

What happens in case of litigation?

Digitrust is not an referee and does not take sides. The **Digitrust** service is a payment tool that invites both parties to act with due diligence for the success of the operation.
