Back-end Dev wanted to complement the team

Are you motivated to combine the art of architecture and design with the art of software engineering ? You like translating workflows to actual code accessed through beautiful APIs ? You love bridging the gap between customer requirements and technical implementation, taking an active role on both sides and defining how the application behaves as well as how fast it responds?

You are a tech-savvy professional, who is curious about new digital technologies and aspires to combine usability with back-end development? Then this job is for you!

Our Company

Digiteal is a FinTech company developing an innovative alternative in the field of electronic invoicing and payments. It is compliant with rigorous regulations of the financial sector, yet you will be surprised, among other things by our self-management organization. At the heart of all our activities are trust and transparency towards our employees, customers and investors.

We are specialized in the development of an electronic invoicing and payment product called Digiteal.

Created in 2015, Digiteal is a startup. This is an opportunity to participate in the early stages of the adventure with us.

Your role within Digiteal

As a developer at Digiteal, you participate with members of the project team in the complete development cycle. This cycle includes the requirements analysis, design, development, testing and finally putting into production with a particular regard to the quality delivered.

Specialized in back-end development, you will be attentive to provide a beautiful API in collaboration with the front-end developers.

We are a small company so if you are capable of providing a helping hand on different levels, it would be an extra advantage. The full stack is setting up servers, deploying on AWS and developing the backend and the frontend.

Your profile

You have a bachelor's degree, master's degree in IT orientation or equivalent experience.

You have solid experience as a backend Java developer for SAAS platforms.

You want to get involved in a business project strongly focused on collective intelligence and self-management. You are able to be autonomous but also to be a teamplayer.

You master the following:
- Java and knowledge of the Spring framework
- Restful APIs
- Test driven design using: JUnit, Mockito, …
- SQL databases design and optimization
- Maven
- Git

Nice to have:
- Web development using Angular / Typescript
- DevOps experience with AWS
- Security expertise

You have professional working proficiency in English. The code and documentation are in English.

Additional points if you also know : FR/NL/DE

Our offer

A very complete package, attractive and corresponding to your knowledge and experience.

The opportunity to participate in an innovative European business project.

A fulfilling work in a dynamic company respectful of the human person.

An environment that promotes learning and discovery.

More:

Company location : Brabant-Wallon with partial remote working (3 to 4 days a week).

Status : employee
